

Vouch Counter Discord Bot

Counts vouches by watching for messages like:

```
vouch @username Elder  
vouch @username Hellmode  
vouch @username Diluvian W (25)
```

Each vouch is worth points based on event type:

Event	Points
Enmity	1.5
Elder	2
Titus	3
Hellmode	15
Deep Champion	15
Diluvian W (25)	3
Diluvian W (50)	10
Parasol	5
Layer 2 (1)	3
Layer 2 (2)	7
Other Bosses	1

Matching is case-insensitive and flexible with spacing (e.g. "hell mode", "hellmode", "Hell Mode" all work; "diluvian w 25" and "diluvian w (25)" both work).

Setup

1. Create a bot at <https://discord.com/developers/applications>
 - Go to "Bot" tab, click "Add Bot"

- Under “Privileged Gateway Intents”, turn ON **Message Content Intent**
 - Copy the bot token (keep it secret!)
2. Invite the bot to your server using the OAuth2 URL generator (scope: `bot` ; permissions: Send Messages, Read Message History, View Channels, Embed Links)
 3. Install dependencies: `pip install -r requirements.txt`
 4. Set your token as an environment variable (don’t paste it into the code): `export DISCORD_TOKEN="your_token_here"`
 5. Run it: `python vouch_bot.py`

Commands

- `vouch @user <event>` — records a vouch (typed as a normal message in the vouch channel). The bot reacts instead of replying with a message:
 -  = recorded successfully
 -  = event type not recognized
 -  = tried to vouch for yourself
- `?vouches @user` — shows someone’s point total and breakdown by event type
- `?leaderboard [n]` — shows the top n vouched users by points (default 10)
- `?addvouch @user <event> [count] (alias: ?backfill )` — manually records old/historical vouches that weren’t originally logged by the bot. Requires Manage Server permission. Example: `?addvouch @Nico Hellmode 3` adds 3 Hellmode vouches at once.

Data storage

Vouch data is saved to `vouches.json` in the same folder, so it persists across bot restarts. Back this file up if you move hosts.

Restricting to one channel

The bot only reads vouch messages from the channel ID set in `VOUCH_CHANNEL_ID` near the top of `vouch_bot.py`. Set it to `None` to watch every channel instead.
